### SUMMARY

---

Computer Science graduate with experience in application development, technical support, hardware/software troubleshooting, and database systems. I know how to use Python, Java, Kotlin, JavaScript, PHP, MySQL, SQLite, RESTful API concepts, Windows/Linux OS, and user support and most of MS applications. Built a POS inventory management application and administrative systems.

### SKILLS

---

- **Languages:** Python, Java, Kotlin, JavaScript, PHP, HTML/CSS, SQL, Typescript
- **Frameworks & Tools:** Android (Jetpack Compose, Android Studio, Gradle, Lock Task Mode), React, Vite, Node.js, Prisma ORM, WebSockets/SSE, Next.js, Django, REST API, Vitest/Jest
- **Databases:** PostgreSQL, SQLite, MySQL, Cloud Firestore
- **Systems:** Windows and Linux deployment and configuration, hardware troubleshooting and repair, PC assembly, LAN and wired network diagnostics, Active Directory
- **Support:** Application support, issue tracking, documentation, inventory management applications
- **Practices:** Git/GitHub, Agile/Scrum, Unit & Integration Testing, Database Migrations, issue ticketing, Zapier, n8n, Google Workspace, Microsoft Office, AI-assisted development (Claude, Gemini, Copilot, Cline)

### PROJECTS

---

#### Mobile POS & Inventory System

01/2025 - 04/2026

*Kotlin, Java, SQLite, XML, Android Studio, Gradle, CameraX, Google ML Kit*

- Built an offline-first Android POS and inventory system using Java, Kotlin, SQLite, CameraX, Google ML Kit and MPAndroidChart.
- Implemented barcode checkout, inventory tracking, transaction management, sales analytics, forecasting, restock recommendations, and PDF receipt generation.

#### **Resume Optimization Tool**

09/2026 - present

*Python, Streamlit, Groq API*

- A Personal project for an AI resume-tailoring app (Python, Streamlit, Groq) that saves your master resume and hotswaps the keywords depending on the target job, uses AI(*Groq*) to act as the ATS machine parsing scores.

#### **Quiz App**

*Kotlin, Jetpack Compose, Node.js, TypeScript, PostgreSQL, WebSockets*

- Built an exam environment using Android Lock Task Mode and WebSocket telemetry to prevent unauthorized app-switching while enabling live instructor monitoring and remote controls.
- Made local draft persistence with debounced REST synchronization, guaranteeing zero data loss during network drops and enforcing a server side timer validation.
- Supported 8 question types with deterministic question pool randomization.

### EXPERIENCE

---

#### **Intern / Drainwiz Computer System**

07/2025 - 08/2025

*Echavez Street, Dipolog City, Philippines*

- Collaborated with senior software engineers on a client web application build, fixing bugs and implementing database connections using HTML, CSS, JavaScript, and PHP to help bring the project to completion.
- Diagnosed and resolved hardware and software issues across company computers Windows and Linux, including OS installation, printer, and network equipment troubleshooting for client and internal systems.
- Worked alongside a two-person senior engineering team under close mentorship, gaining hands-on experience in real client-facing web development while balancing IT support responsibilities.

**Help Desk Technician / Virtual Buddy**

03/2022 - 05/2022

*Minaog, Dipolog City, Philippines*

- Provided technical and application support for customers and employees in a fast-paced call center environment, troubleshooting hardware, software, and system issues.
- Guided users step by step through issue resolution, communicating clearly with both technical and non-technical staff.
- Logged and tracked reported issues for technician follow-up and escalation, maintaining accurate records for documentation.

**Freelance Developer / Web and System Applications**

01/2023 - Present

*Remote*

- Rebuilt frontend components for a legacy School System and 2 barangay management systems across Mindanao, replacing outdated code with modern frameworks and techniques.
- Addressed recurring portal downtime and slow load times, resulting in noticeably faster performance and more stable, reliable uptime post-rebuild.
- Contributed to backend database integration by defining object and function naming conventions for REST API POST and GET endpoints to support frontend-database data flow.
- Assisted in migrating legacy functions, methods, and UI designs from non-framework code into Node.js, React, Next.js and Django-based systems, ensuring existing functionality carried over correctly during the framework transition
- Collaborated with fellow freelancers and system stakeholders to scope requirements and prioritize fixes across the school system and 2 barangay systems.

**EDUCATION**

---

**Bachelor of Science in Computer Science**

08/2022 - 05/2026

*Andres Bonifacio College**College Park, Dipolog City, Philippines*

- Coursework: Software Engineering, Object-Oriented Programming, Data Structures and Algorithms, Database Systems, Computer Networks, Web Engineering, Artificial Intelligence, Information Security, Discrete Structures
